

How to Understand the Community Canopy Profiles

1. Header: The name of the unincorporated community.

2. Land Cover Bar: Displays raw land cover percentages derived from the land cover classification.

3. Land Cover Map: Presents a colored representation of the land cover data, including a basemap and street overlay.

4. Scale: Provides distance reference.

5. Adjusted Canopy Cover Percentage: Indicates canopy percent within community-focused zones

6. Inset Map: Shows the community's location within LA County.

7. Percent of Land Cover by Zones Plot: Displays the top five aggregated community-focused zones within the unincorporated community. If single-family or multi-family residential areas are not among the top five zones but were present, they are included in place of the smallest of the aggregated top

five types. Please note that some communities may have fewer than five community-focused zones.

8. Percent after Zone Name: Represents the proportion of the zone's area compared to the total area of all community-focused zones within that community.

9. Percent within Land Cover Bar: Represents the proportion of the land cover classes area compared to the total area of that zone.

10. SS Level: Based on the population area-weighted average social sensitivity (SS) scores, unincorporated communities are classified into low, medium, and high SS levels. A high SS level

indicates a higher sensitivity to climate hazards, a medium SS level indicates a moderate sensitivity, and a low SS level indicates a lower sensitivity.

11. Canopy Level: Adjusted canopy percentage is categorized into three ranges: 0.0% to 9.9%, 10.0% to 14.9%, and 15.0% or more. Communities with 0% to

9.9% canopy cover have less canopy, while those with 15.0% or more have more canopy cover.

12. Canopy Need: The result of combining canopy level and social sensitivity level. Low canopy need indicates that the community has a lower need for tree planting initiatives/funding compared to communities with high canopy need.

13. UCF Grant Proposed Project Location icon: Prior to this analysis, the County identified this community as a potential recipient of funds from the Urban and Community Forestry (UCF) Grant, supported by the Forest Service, U.S. Department of Agriculture (USDA). This proposed project aims to use the grant for planting street and/or park trees within the community. Communities without an icon are not designated for this particular grant fund.

14. Neighborhood Workshop Location icon: This icon signifies that a workshop was held within this community as part of the CFMP's community engagement efforts. Communities without this icon indicate that a workshop was not held within this community.
